

How to Migrate a Standard Parts database from 2021 to 2022

This Tech Tip looks at how to take a server based Standard Parts database version 2021 and upgrade to version 2022. What needs to be done to upgrade the database.

On the machine with the Standard Parts Administrator software installed

Uninstall Standard Parts Administrator 2021

Uninstall Solid Edge 2021

Restart the machine

Install Solid Edge 2022

Install Standard Parts Administrator 2022 (no Master Parts!)

Install the latest maintenance pack

Restart the machine

On the Standard Parts server

Important: Grant the DB user sysadmin privilege

On the Administrator machine

Run Parts Management Administrator

Browse to the Standard Parts Configuration folder - Hit ENTER

The old working database is detected automatically

Start migration

Save settings

The database is now upgraded to version 2022
